BUSINESS CASE

Automated data warehouse with SAP source in a German SME

THE COMPANY

In the year 1919, Leo J. Wahl invented the electric hair-clipper. Since then, the Wahl Clipper Corporation, based in Sterling, Illinois (USA), has been a leader in the field of hair clippers for both hairstylists and home hair care. Today, with over 4000 employees worldwide, the Wahl Clipper Corporation continues the legacy of Leo J. Wahl, which he initiated over 100 years ago. We take pride in carrying forward the tradition of innovation and top-notch customer service.

CHALLENGE

The client had a data warehouse that wasn't living up to its potential. Their objective was to make all the information from their SAP ERP system ready for reports, without having to depend solely on SAP BI tools. This information came from different sections of SAP, including MM, QM, and FI modules.

THE SOLUTION

In just 15 days, our collaboration with AC led to a remarkable transformation in our data warehouse (DWH) setup. Response times skyrocketed by 3-5x, DWH size shrank from 240GB to 30GB, and loading times tripled in speed. Existing reports seamlessly transitioned with minimal adjustments, and historical data storage became a reality. Our internal IT, in tandem with RX, quickly adapted the DWH, fostering independence and spawning additional data marts across key business areas like CO-PA, Sales, Purchasing, Logistics, Controlling, and Cost Accounting. This united effort has turned our data management into an agile powerhouse, primed for maximum efficiency..

BENEFITS:

- ✓ 80% cost and time reduction
- ✓ Minimized Project risks.
- ✓ Reduced operational complexity

- ✓ Reduced project risks
- ✓ Reduce operational complexity
- ✓ Agile approach
- ✓ Easy to use
